YaraTera[®] KMAX

A New Formulation for Safe and Flexible In-Season Potassium Nutrition

YaraTera KMAX provides readily available, fully soluble potassium to nuts, fruits, and vegetables; preventing deficiencies and encouraging growth of high-quality, healthy crops. With 28% K₂O provides a high concentration of potassium delivered in a carbon-based material to support better nutrient uptake. YaraTera KMAX is safe for crops, giving growers the peace-of-mind by reducing the risk of crop burn and avoiding accumulation of undesirable salts.

Guaranteed Analysis:	
Soluble Potash (K ₂ O)	28.0%

The below graph demonstrates the solubility at different temperatures of Potassium Formate, the compound of YaraTera KMAX

Benefits

- Fully soluble for maximized uptake and efficiency of potassium
- The most soluble potassium source of any common potash fertilizers
- Enhanced potassium formulation that helps to mitigate risk of crop burn
- Provides growers more flexibility for their fertigation plans to meet crop demands with optimized application timing and blending options with existing YaraLiva Calcium Nitrate applications.

Potassium

Potassium has an important role in ensuring prime quality fruit, nut, and vegetable crops by influencing the level of sugars, as well as ripening and storage characteristics. Potassium also promotes crop resistance to many pests and diseases. Fruit and vegetable crops often take up as much or more potassium as nitrogen with the greatest demand occurring during fruit and vegetable bulking.
